

# Banexport - Las Nubes - Laurina Varietal (GrainPro) (Europe)

We have three specific variety separations shipping from this harvest: Geisha, Rume Sudan, and Laurina.

Laurina is a naturally low-caffeine content variety of Arabica, at 0.6% compared to 1–1.2%.

The attention to detail and processing techniques executed by Camilo and his staff at Finca Las Nubes are world-class. We are seeing some of the most extreme examples of innovation at the farm level in Colombia.

We are so excited for you to taste this coffee!

---

**Laurina** is a Bourbon derivative originating from Reunion Island with a recessive gene mutation that gives it a dwarf-like habit, small leaves, small, pointed seeds and very low caffeine concentration: as low as 0.6% when compared to the 1.2% of Arabica and 2.2% found in Robusta. The Laurina is also parent to Mocha varieties, known for uniquely small beans and even more exotic flavors.
